LIS问效

```
问题描述:
```

对序到 X: X(0) X(1) ··· X(n)

有子序列 a: a(o) a(ı)·· a(m) m≤n

满足 vicj, a(i) < a(i),且a为X中满足条件的最长子序到

论C(i)为以X(i)结尾的L15长度

则
$$C(i) = \max\{C(P_i)\} + I$$
 P: 满足 $P_i < I$ $\times [P_i] < x[i]$

例如X={1645382}

杨子 0 1 2 3 4 5 6

C(0) = 1

$$C(1) = \max \left\{ \frac{C(0)+1}{1} = 2 \right\}$$

C(2) = max { (6)+1 = 2

$$C(1) = \max \begin{cases} c(0)+1 \\ c(0)+1 \end{cases} = 3$$

 $C(4) = \max_{1} \int_{1}^{(0)+1} = 2$ 1458

$$C(5) = \max \begin{cases} \frac{(6)+1}{(4)+1} = 4 \\ \frac{(4)+1}{(4)+1} \end{cases}$$

 $C(6) = \max \begin{cases} (6)+1 \\ 1 \end{cases} = 2$

的代码 水 X的的LIS

main

for i in (0:n)

tempn, tempc= cacul_c(i)

if tempc > Max

Max = tempc

if num-list don't have tempn

num-list insert (tempn)

return num-list, Max

cacul_c(i) // 计算 c(i)

芳朵开递归会产生大量重复计算,故采用DP

C(0) C(1) C(2)... C(4)

max = 0

tor j in (0:i)

if max < X[i] < X[i]

max = x[j]

max_num = j

return max-num, max+1

num-list为LIS下村、, Max为LIS长度

当有Cli)成为最大值期,设Cli)= C(P)+1,则X(P)应为LIS中的一元意。
